Understanding the Various Aspects of the Gallbladder by [James Blee](#)

Article published on December 26th 2011 | [Health](#)

The gallbladder is pear shaped and is around 4 inches in length. It is located right below the liver and remains fixed to it. Any pain or ache in this region signifies a disease of the gallbladder. The liver produces bile juice which is collected in the gallbladder. The prime activity of it is to store the presently unused bile juice, needed to counterbalance the fat consumed by us. There will be no problem of the body without the gall bladder. It will work just as before. This is the reason that doctors operate out the gallbladder when a person suffers from its ailments. The only change that happens after this is the direct entry of bile from the liver to the small intestine. Sometimes difficulty may happen for a person without the gallbladder as the bile ducts become distended but there is no problem with that.

The most frequent sickness of gallbladder is the gallstones. Gallstones are small in shape and look greenish or slightly blackish in color. Due to the absence of adequate amount of bile juice that deactivates cholesterol, gallstones are produced as the excess cholesterol solidifies. These stones avert the liberation of bile from the gallbladder. The symptoms are tremendous pain and infection in the inner walls of the gallbladder. Gallbladder cancer is the other problem with gallbladder which has got life-risks in it. There are many reasons for its occurrence, bursting of the walls of gallbladder is the most common reason. If the blood flow to it is inadequate, then gangrene occurs. The gallstones prevent the apt activities of the pancreas, a state called pancreatitis. Eating food having low fat and cholesterol can thwart ailments of the gallbladder. Immediate consultation with a doctor is recommended if you face pain in the upper right abdomen.
