Wearing Corrective Contact Lenses: to Aid People with Visual Problems See Clearly
by [Vincent Davis](#)

Article published on February 15th 2012 | [Health](#)

However, most people take for granted the sense of sight, which permits them to value the world and to perform their day-to-day activities.

Visual impairment is a condition that impacts millions from all walks of life. According to the World Health Organization, there are currently 285 million visually impaired people around the world. Around 39 million are blind while around 246 experience low vision. Not surprisingly, 90% of the visually impaired live in the world's developing countries.

Various elements lead to visual impairment. Uncorrected refractive errors remain one of the major causes of eye conditions worldwide. In addition, one's lifestyle and interests may contribute to blurred vision and eventually, visual impairment. World Health Organization further reported that eye cataracts continue to be the number one cause of blindness in low- to middle-income countries.

Luckily, based on the World Health Organization's October 2011 Fact Sheet, the number of people burdened with visual impairment because of infectious diseases has substantially decreased in the past twenty years. What is more interesting is that 80 % of all visual traumas are deemed curable.

Most conditions of the eye could possibly be prevented if people would only take matters seriously and follow healthier lifestyles. People are also encouraged to visit their ophthalmologist or any general physician should they begin experiencing blurry vision and frequent headaches. These symptoms may create more severe problems when overlooked.

Thankfully, developments in medical technology have introduced the way for various corrective treatments like glasses and contacts Vancouver patients use. Corrective glasses are by far the oldest treatment for visual impairment like uncorrected refractive blunders. They have aided people watch better as far back as the early 1800s. Today, corrective glasses, along with the contact lenses, make it possible for people with myopia, hyperopia, or astigmatism to attain a better quality of life.

Contact lenses Vancouver centers provide, on the other hand, are available in numerous forms. Corrective contact lenses work like normal eye glasses. However, they're more beneficial because persons do not need to put on large ugly glasses that limit their peripheral vision. It also decreases the possibility of misplacing glasses and leaving one not able to see clearly.

Today, a lot more people put on contact lenses as their liked form of corrective eyewear Vancouver eye doctors suggest. Now, just imagine what a better world it would be if the 246 million people with visual complications had the ability to wear corrective lenses.
