Excalibur Crossbows for Those Who Love Adventure by Julia Roger

Article published on December 5th 2011 | Hobby

An advanced cross bow could be an ideal aide for a hunting expedition or for an adventure filled weekend. The design of crossbows has become far more efficient than what it used to be, especially with the use of high quality materials in their construction. Excalibur crossbows, for example, are as good as they get, with a draw weight of 200 lbs. Used a lot for crossbow hunting these crossbows are cheap, but highly efficient and reliable..

So what makes the Excalibur crossbows so efficient? A part of the reason is their recurve limbs, which ensure that greater arrow velocities can be achieved with lighter and smoother bows. 350 grain arrows, 20 inches in length can be used for distances of up to 25 yards. The hardwood finish of the crossbows makes them more aesthetically pleasing too, while assuring you of their durability and resistance to heavy duty handling during a busy weekend.

There are several varieties of excalibur crossbows like the Equinox that is light and offers multi range accuracy. This particular model even comes with a base and mounting rings, along with mounting brackets to securely hold the arrows in the quiver. There is a mechanism to provide precise string alignment as well. To add to the features of these crossbows is the electronic sighting system which is compact, along with four sighting dots to mark the trajectory of the arrow in red and green colors. These crossbows provide a dead eye accuracy for those who are shooting enthusiasts and do not like missing their target. Not only are these very accurate, but they are also noise free. The lightweight construction does not take away anything from the sturdiness of the mechanism either.
