Article published on February 24th 2012 | Hobby

How hard is it to fly an RC helicopter? This is the question usually asked by those who are interested to own this kind of toy but may be hesitant that they might break it after purchasing if without the knowledge of how to pilot this device. Even those who already know how to fly one would still ask this question and it will depend on the type of RC toy they are referring to.

Just as there are different kinds and types of RC cars and trucks, there are also different styles and kinds of RC helicopters. There is the toy kind, an RC Quadrocopters, Electric, Micro-coaxial kind, Nitro RC, Gas RC, Turbine RC and Scale RCâ€™s. With each kind of RC helicopters there is a slightly different approach to flying it and maintaining it.

As many people have said, an RC Helicopter is as hard to fly. Well, of course it is. It will take a while to of practice. Actually just donâ€™t practice a whole lot, but a lot and more if possible. It you own one you will find out that, if you are not that careful, your RC helicopter toy has the tendency to break easily in mishandled flying.

Thought it may be the hardest toy to operate, flying it can be learned and as always there are a few ways to start learning. You just have to pick the best strategy and work on it. As far as advices go, you can practice flying your RC Helicopter by learning first from a professional. Yes, a [professional because this toy is not just made for the small boys but also the big ones.

Back then, a nitro powered single rotor is the only option to learn its components about in order to start learning to fly the RC toy. It will definitely help if you are familiar with that kind of the toy part. Itâ€™s also different to learn flying a heli with micro co-axial component. If you think that itâ€™s the same, be careful for it is not.

Crashing is inevitable and there are toys that do not function if parts of it internal or external have been broken. This is why it is advisable if you would like to get serious about flying an RC helicopter, you will need to invest not only time but also money to see great rewards. Just like owning a business is a risky undertake, so is flying an RC toy. Expect to crash in 10-20 seconds if youâ€™re a newbie.

Learning flying the toy the first time is mentally exhausting. It you intend to practice only two hours every day, thereâ€™s a possibility that because of your determination, it could already take the whole afternoon or even a day. If you really want to be good, invest a good ample of your time and youâ€™ll soon be a pro.

Online, there are flight tutorials on how to make your RC helicopter fly up in the air. It could be frustrating to make mistakes while flying but also rewarding when you learn new tricks for flying. Once learned youâ€™ll realize that flying is easy but mastering is not.
