Panasonic Lumix Tz10 Review - and Its Very Useful Built-In GPS

by Rayley Knight

Article published on March 10th 2012 | Hobby

We have summarized all the relevant and important information about Lumix TZ10 digital camera. You can see that in our Panasonic Lumix TZ10 Review. This digital camera is otherwise known as the DMC-ZS7 in the United States of America. It is the Panasonicâ€™s range-topping travel camera with a great zoom feature. It has a 12x 25-300mm lens,, a built-in GPRS geo-tagging, and a AVCHD video with a stereo sound.

The Panasonic Lumix TZ10 Review also explains where the idea and appearance came from. Made from its predecessor, the TZ7 model, this digital camera has also a 14.5 megapixel CCD sensor and it actually shoots approximately for up to 12.1 megapixel resolution. In addition to that, it copies images with the lens set from 25mm to 300mm in any of the three aspect ratios available: 3:2, 4:3, and 16:9 while it is upholding the same diagonal angle of view.

Since it has a built in GPS unit, it automatically embedding the latitude and longitude in the EXIF information and tracks where the every image is taken. According to Panasonic, the new Intelligent Resolution of this digital camera can be used to simply make at rest images as well as video look better or digitally boost the zoom ratio up to 16x without barely any loss in quality.

Our Panasonic Lumix TZ10 Review also states about the formats of the images and videos as well as the price of this digital camera. In addition to the Intelligent Auto Mode and a variety of scene modes for beginners, the Lumix TZ10 as well implements a long requested feature for the TZ-series which is the A, S, and M exposure modes for creative photographers.

This digital camera has also a high-speed and high performance Venus Engine VI processor, 720p HD video recording in the AVCHD file format or motion JPEG formats in the images, power O.I.S. anti-shake system as well as 3 inches LCD screen with 460K dots that completes the headline specifications. The Lumix TZ10 is very available in the colour of red, silver and black suggested retail price of $399.

In our Panasonic Lumix TZ10 Review, we will also give an emphasis on whatâ€™s new to this digital camera. The manual control over exposures, ultimate travel companion, improved image stabilization, and the built in GPS receiver to identify the locations of your shots and make sure that the clock is always telling the correct time are the features that are new to the Lumix TZ10. This digital camera also comprises a database of over half a million landmarks enabling every user to recognize many of their photos. Because of its 12.1 megapixels resolution, there is also an expected boost in its resolution.

Our Panasonic Lumix TZ10 Review also would like to give credits to its GPS. Its built in GPS is another unnecessary boost in resolution aside from the 12.1 megapixels. The GPS of this digital camera can be physically turned off when it is enabled since it still continues working even when the camera is turned off.
