Article published on June 19th 2012 | Home

Remote control or RC wheels are miniature replicas of real life size wheels. RC wheels must be the right size and shape to fit perfectly with the electric remote control cars. Car fanatics will hunt high and low to find RC wheels for a more fun and realistic experience. RC wheels are a must for competitive racing whether the RC wheels will be on the road or off road â€“ the type of road surface will determine which RC wheels are required such as loose dirt tracks, packed clay, sand, rocks.

RC wheels and tyres are one of the most important factors to consider and the choice of RC wheels will depend on the type of racing and whether you wish them to look super hot on your car. RC wheels and tyres can be either extremely firm or ultra soft, some RC wheels may come with spikes or some may need smooth RC wheels and tyres for speed. The amount of tread on RC wheels must be exactly accurate to ensure they are fit for purpose which makes it easier for you to control and handle your machine on any type of surface. RC wheels are popular for off road remote control cars and monster trucks.

RC wheels come in any shape and size from chrome and a range of colours such as white, yellow, black, red and alloys such as carbon steel, brass, copper, titanium, aluminum, stainless steel and hastelloy.

You can also find three piece split RC wheels which tend be made with high quality materials and better standard than imitation RC wheels as three piece split RC wheels rim are normally manufactured in the same way as real full size racing wheels. There are three piece split RC wheels kits making them exciting and easy to assemble. RC wheels kits could include the wheel, rims and foam tyre inserts to make them all secure, glue is necessary to keep the inserts and tyres on the rim.
