Common Outdoor Plumbing Problems in Indianapolis Homes by [Dwane Zelinsky](#)

Article published on April 23rd 2012 | [Home](#)

Maintaining your backyard is one of the most important parts of being a homeowner because the state of your backyard will reflect on your home value. In your backyard, one of the things you need to keep an eye out on is the plumbing. Outdoor plumbing involves pipes going to your pool, sprinklers, irrigation systems, drainage, among others. If you have an outdoor sink beside a barbecue grill, or a pool in your backyard, you need to ensure your entire outdoor plumbing system is in great condition. Digging activities and the wear and tear of elements can cause problems with your plumbing. Even with careful planning and organization, your plumbing systems can still run into trouble. Exposed Pipes Sometimes, landscape and remodeling contractors leave pipes exposed due to poor excavation and overall construction planning. These pipes will degrade over time, and eventually cause breaks. A leak in a single pipe can result in your water bill skyrocketing, so watch out. If you see any breaks on exposed pipes, call an Indianapolis plumber as soon as you can to fix the problems. Roots One of the biggest problems Indianapolis homeowners encounter regarding outdoor plumbing are tree roots that interfere and may cause undue stress on your pipes. A good way to prevent this is to place root guards when the tree is first planted to steer the roots away. If a tree is already fully grown, make sure to keep your piping away from the roots.

Freeze

When water is left in the pipes of your outdoor plumbing system during winter, the water will freeze and expand, causing the pipes to break. To prevent this, you need to know how to winterize your plumbing system. The best way to do this is to call an Indianapolis plumbing company for help.

The Gardener

If you hire a gardener to maintain your backyard, make sure he is aware of the system of outdoor plumbing in the places he's allowed to work so accidents can be avoided. Lawnmowers run over and destroy sprinkler heads, and shovels hit and break pipes, or crack the drip tubing. When these things happen, call Indianapolis plumbing services immediately and talk to your gardener about the breaks.

If you're not sure about the status of your plumbing system, both indoor and outdoor, you should call professionals in plumbing Indianapolis has for a checkup.
