Article published on March 16th 2012 | Home

It is quite refreshing to swim in the home pool after a tiring day. It is not only refreshing but also healthy because you have the whole body exercise done in minutes. But what if your pool is not clean? The healthy exercise becomes unhealthy. That is why cleaning the pool becomes very important and it is more important to choose the proper pool cleaner to make the job easier for you. There are different types of swimming pool cleaner available in the market but to get the proper result you need to choose the proper cleaner for your pool.

pool cleaner clean the pool from every angle and they can be used in both personal and commercial pools. Even if you use an inflated pool, these cleaners are appropriate for you. It makes your pool safe. There are mainly three types of pool cleaners available in the market and their usages are also different.

The first of them is â€˜pressure side cleanersâ€™ which works with one of the two available options. It use either the return pressure or the water returns of the pools secondary pump and this booster pump cleans the dirt and pushes it into the cleaner. It is possible to filter the fine dart with this system.

Suction side cleaners work just like a vacuum cleaner which is powered by water. It emphasizes the suction power of the pool itself. It sucks the debris and the dirt from the bottom and the filter cleans them all.

In case of automatic cleaner the vacuum system of the pool is controlled by a computer. The microchip that is installed here controls the movement. These cleaners can scrub the system and can be operated with pump and the filter system. It is quite efficient and it can also work without the pump system if required.
