Electricians â€“ to do list

By Glyn Jones

Article published on August 12th 2012 | Home

When you plan big repairs and renovation in your home, particularly involving the electrical system, you certainly turn to a professional electrician to get the job done right. There are several electrical companies available in the market and many among them charge a trip fee for each visit their electricians make and an hourly service fee â€“ even if the job takes much less time than an hour.

Next time you call an electrician, consider using time and of course the fee that you are to sacrifice from your pocket. You can ask your pro to take on additional smaller tasks that will improve home safety, comfort and convenience. Following ideas might be helpful to you.

Review electrical service:

Have your electrical services evaluated. This particularly implies to older homes with an outdated 60 AMP Service. But the newer homes may also be taxed where the standard 100 AMP Panels are overtaxed with the modern electronics that you posses in your home.

Upgrade old Outlets

After a considerable period of time, you ought to change the existing outlets to Ground fault Circuit Interrupter outlets (GFCI Outlets). These will certainly improve your home safety as they automatically switch off in case of an emergency.

Installation of New Phone Jacks

For additional convenience with phone and computer technology needs, installation of new phone jacks would be quite helpful.

Addition of dimmer switch

Replace your toggle switch with a dimmer switch. This will help you easily adjust your light levels for different needs.

Under cabinet Lighting installation

Installation of under cabinet lighting will brighten your kitchen, home office or even family room.

Installation of programmable Thermostat

This can do much to save power and energy bills. According to some estimates a programmable thermostat can cut energy bills by 15 percent or even more.

Get an exterior outlet

This can be again a part of very useful strategy. An exterior outlet eliminates the unsafe power practice of running an extension cord from an indoor outlet.

Many individuals may think of doing all such repairs and installation job of your own since they are more concerned of the installation fee that a London electrician would demand. But one thins that is to be made clear here is the fact that, electrical fitting need lots of experience and expertise to do

the job. If errors place in any part of the systems can result in entire power failure and can become cause of some serious accidents and can prove fatal.

So, it would be wise to get the electrical repairs done from some very experienced and qualified electricians in London. Electricians are required to undergo rigorous training and they have to work for a certain period with some certified electrician before they can themselves acquire the certification. This usually makes a certified electrician an expert in his field who can do all the fittings and installation to maximum safety standards.

When electrical renovations or reinstallation is in your mind, its certainly the time when you should call the experienced electricians London for the job.
