Rubber Hose Serve Multipurpose by [James Blee](#)

Article published on June 11th 2012 | [Home](#)

Multi-purpose utility products are in great demand at any work place. If one tool can do many jobs then it is obvious that its value will go up and it becomes sought-after in the market.

Rubber hose is one such product. It is used in many different areas because of its elasticity factor and flexibility. It comes in various shapes and sizes and its uses are very different too. One need to buy according to the use at the moment and all of them are readily available in the market too.

One of the uses of rubber hose is as an air intake hose. Air compressors and air pressure tools use rubber tubing or hoses. Such hoses are used in garages and paint sprays. Another use of rubber hose happens in the case of jewelry design. The rubber tubes of radius of few millimeters or less are used to make jewels. If one were to run back the clock and turn back memories to those of school days, one will remember about the use of hoses in the school laboratory. In labs, it is used to connect various test tubes. The rubber tubes are mainly used in transfer of gases too.

One of the domestic uses of rubber hoses is in garden to water the plants. This can be a very good substitute for sprinklers. You need to leave it open for few hours and the entire garden will get watered.

Besides the above mentioned uses, rubber hoses are also used at the fitness centers. Ranging from stretching exercise to others, the rubber tubes are used. These are some of the few uses of the rubber hoses both at the domestic level and in other work places. It is, however, used in great deal of other place too.
