The Advantages of Solid Wood Flooring by Glenn Farrier

Article published on February 21st 2012 | Home

Are you considering installing natural solid wood flooring in your home? There are many reasons why this type of flooring is such a popular choice. Here are some of the main advantages:

Style and Beauty

Quality natural solid wood flooring looks amazing no matter what style of decor your home has and will make your house look elegant and luxurious. Solid wood floors go well with a sleek and contemporary decor as well as a cosy and rustic style. They simply match almost every type of furniture and they go with all types of colour schemes. No matter how you are designing your home decor, you can be sure that solid wood floors will integrate beautifully into your design.

Durability

Solid wood flooring lasts a very long time and is one of the hardest wearing types of flooring available. With minimal maintenance and care, this type of flooring can retain its beauty and elegance for several years. As the years go on different tones emerge and the grain patterns in the wood deepen, giving it even more character and beauty. Over the years you can sand, re-varnish and re-paint your floors many times to keep them looking fresh. You will see many buildings which are one hundred years or older which still have the original hardwood floors and they are still in great shape!

Health Benefits

It might not be the obvious advantage that you think of when considering natural solid wood flooring, but these types of floors can create a much healthier home environment. You will not have to worry about allergens which are released by dust and other irritants in carpets over time. Even tile floors can harbour bacteria in the grout areas. However, solid wood flooring does not hold these air pollutants and so they are much healthier for your indoor environment.

Also, since the wood has small gaps between the planks it will increase the organic air flow in the room. This means that the room will always be blessed with lots of natural fresh air and you will breathe easier!

Warmth

Donâ€™t you hate the feeling of stepping out of bed in the morning onto a cold floor? Solid wood flooring is a natural insulator because of the thousands of tiny air chambers which are in each cubic inch. It holds in the heat so that it is more pleasant to walk on.

Ease of Cleaning

Unlike carpet which needs to be professionally shampooed, hardwood floors are easy to clean. All you need to do is a little bit of sweeping and mopping with the appropriate hardwood floor cleaning products and you will see the wood sparkle and shine.

These are just a few of the advantages of choosing solid wood flooring for your home.
