Toilet seats are places where germs can thrive. And in public restrooms, this is a matter of great concern as they are used by so many people and some of them do not have the least bit of concern about hygiene and cleanliness. They are used by all and the sundry and toilet seats can pass on germs just by using them to open and close with bare hands.

Although all of us make it a point to wash our hands after we exit a toilet, chances of contamination might still be there because of absence of soap. The best thing would be to opt for automatic toilet seat cover. They are operated with the help of a small switch at the side. One can flip it open and close without having to touch the toilet seat at all. Moreover, it keeps the toilet covered at all times of the day.

Most of us use automatic toilet seat cover now in their homes and they are also installed in the bathrooms of big hotels. They are quite sturdy and strong and they can also withstand every kind of pressure. One of the major reasons of using them in public restrooms is that they are more or less the able to withstand the pressure of continuous flipping and opening. The other reason is that they are very cost effective. In fact, any community can install them in their own restrooms without hardly any major expenses.

They are usually made from sturdy plastic and are waterproof and durable. And even if they do break down, they can be fixed very easily. So do install automatic toilet seat covers and ensure the all round hygiene of the community people.
