Why Solid Wood Flooring is Great to Have in the Home by [Glenn Farrier](#)

Article published on February 21st 2012 | [Home](#)

When the time comes to decorate your home you will be surprised at the enormous variety of options available to you. With so much to take into consideration from the flooring, the walls and the furnishings within, it is no surprise that there are many different variations to choose from. When it comes to flooring you also have a number of choices and solid wood flooring is something that many people prefer.

Good Looking

One reason for the popularity of wood as a flooring option is the look. A wooden floor can look very stylish and chic without going over the top, and can also help to set the mood in the room. Whether or not you think a wooden floor would look good in your home will depend largely on how the rest of the room is decorated. Natural solid wood flooring can help to give a warm, rustic feel that is particularly enjoyable on those cold winter nights.

Easy To Clean

Most of the time, to clean your floor you need do little more than sweep it. Any dirt and dust comes away very easily leaving behind a surface that is clean and looks great whereas carpets are more likely to trap and hold dirt in time. Should sweeping not be sufficient to remove the built up dirt then a damp mop should be enough to remove the more stubborn dirt. Having a flooring surface that is so easy to clean makes it ideal for families where young children and pets are present. Any spillages on solid wood flooring are easily mopped up without fear of staining and pet hairs are easily removed with no effort at all.

Durability

Another great thing about natural solid wood flooring is that it can stand up to the everyday wear and tear it is exposed to. Even dropping heavy objects on the flooring should have little or no effect and there is no risk of anything becoming torn by sharp objects and pet's claws. The wood is treated, making it temperature and weather resistant so there is no need to worry about it rotting away any time soon. Solid wood flooring is also treated for protection against insects so bugs such as wood worm or termites will not threaten your flooring in any way.

With such good looks, ease of cleaning and durability it is no surprise why wooden floors are a very popular choice and nobody is disappointed that they decide to have it installed. So, if your old carpet has seen better days and is approaching the days where it should be replaced don't forget to consider wood flooring as an option. You may be surprised at the options available to you in terms of natural solid wood flooring.
