Safety and convenience ensured with flexible sign posts by Hipolit Jan

Article published on January 25th 2012 | Home Business

Sign posts on highway are subject to a wide range of impacts and pressures. These sign posts need to be extremely hardy to resist these challenges and maintain longevity. Flexible sign posts are made of durable polymers which are designed to withstand high vehicular impact. These posts have an inbuilt internal sign hardware to mount signs. Available in varied options of Anti-Glare Panels and Temporary Signs , sign posts can be customised according to requirement and the location of placement.

Temporary sign posts have surface mount pin lock base mechanism which enables portability of these signs. Some even have a portable rubber base which makes it convenient to move around and place them as per requirement. Soil anchor sign posts are for prolonged temporary use and have a drivable soil anchor. These can have variable leg and base configuration.

Injection moulded temporary sign posts holders are another viable option for erecting temporary signs. These can accept 400 X 350 mm signs. These are secured to the ground with metal prongs which makes the sign post sturdy. This is an ideal option for sporting events, real estate agents and for posting safety messages. Available in vibrant red, blue and yellow colours, these temporary sign posts ensure attention to the message being conveyed by them.

Flexible sign posts are available as stocked posts or blank posts which can be customised as per requirement. These can be endowed with symbols and graphics depending on the purpose the location of placement of the sign posts. Heavy duty flexible sign posts have a tough swing hinge construction which permits these sign posts to endure common exposures to wind and vehicular impact. These are also available with surface mount pin lock, drivable soil anchor and portable rubber base as per requirement. These are available in varied options of blank panels, striped yellow and black panels, orange and white panels , directional sign panels and pedestrian crossing panels.

Anti -glare panels are important to ensure safe driving conditions especially at night. A lot of mishaps occur on roads due to absent or faulty anti glare signs .Anti glare panels can be mounted on concrete or W-beam guard rail. These are extremely durable as they are made of a fibre reinforced base which permits them withstand intense impact. These are resistant to fire and ultra violet radiations and can withstand extremes of temperature ranging from minus 20 to plus 100. Anti glare panels are easily installed using screws and epoxy resins and can be easily adjusted after placement. Variable post length ensures convenient positioning as per requirement. Available in multiple colour options , anti -glare panels can survive up to ten years under extremely challenging conditions with minimal maintenance.

The basic requirement of all road safety products is durability and endurance to weather conditions and vehicle impact. These properties ensure that the sign posts maintain their functionality for prolonged time periods. With the introduction of flexi sign posts safer roads have been ensured with maximum convenience and minimum maintenance .
