Basement - Water Proofing by Sophia

Article published on February 27th 2012 | Home Improvement

Basement waterproofing is a necessity when it comes to keeping your building safe and intact. Water is the most damaging source to a building as it attacks the foundation of the structure. The houses and buildings with basements get most affected by waterâ€™s slow intrusion and cause moisture related issues like decay, mold and cracks etc.

A study says that almost 85% of all the new constructed buildings with basements, experience a water-related issue within the first three years of their life-cycle. Such statistics pose a threat to all buildings with basements. Even if youâ€™re amongst the few ones who have never experienced a wet basement, why put your building to damaging risks by avoiding a basement waterproofing system installation.

NYC Roofing Contractor offer state-of-the-art waterproofing systems at economic prices. We have a huge variety of basement waterproofing systems to select from and can help you choose the one that will end your waterproofing worries, once and for all.

We are licensed waterproofing contractors for the state of New York and New Jersey and our service motto is; drain and seal. Our basement waterproofing systems not only drain the water out of the building but help keep it away too.

By choosing NYC Roofing Contractor, you are making sure that your building gets safe and remains safe. Unlike other contractors who donâ€™t share the causes of water damage to their clients in hopes of ripping them off with high prices, our professional team of workers share all this information the moment they spot the cause. This helps our clients make informed decisions regarding the safety of their buildings.

Such customer oriented services have always been our norm and will continue to be so. Call us if you need expert basement waterproofing advice without having to empty your pockets.
