Ceramic and Cork flooring in MA by Kipling Patel

Article published on December 18th 2011 | Home Improvement

Lexington MA cork flooring is an increasingly popular choice in the area, providing many significant benefits. The honeycomb makeup that occurs naturally in cork is comprised mainly of air, accounting for the springy softness available to discerning homeowners in Lexington, MA. Floor installation of cork will provide plenty of comfort and durability as the honeycomb structure can be pressed down to 40% of its original size. The cork flooring then returns to its original state with no damage.

Cork flooring also offers natural benefits to both safety and health. Natural substances in cork keep it resistant to insects, mold and rot; all of which could otherwise present health hazards. Cork is also fire resistant, making it an ideal choice for any Lexington, MA cork flooring option. Another advantage to cork is its sound absorption characteristics. In fact, cork is often used as a soundproofing material. This makes cork even more ideal for an upstairs floor, deadening noise and keeping downstairs quieter. These same characteristics also make cork a natural insulator, keeping warm or cool air in a room anywhere in Lexington, MA.

Cork flooring also offers the benefit of being one of the 'greenest' flooring materials around. It is a natural resource that is completely renewable, with many types of cork coming from the bark of trees that can be stripped off time and time again without killing the tree. The fact that cork can be harvested without the deforestation associated with other types of wooden flooring makes cork a favorite in any Lexington, MA floor installation. Finally, the durability and beauty of cork flooring are selling points that should get any home owner interested. No paint or design is necessary; the natural beauty of this material stands on its own. In terms of durability, picture a cork in a wine bottle, compressed for months, years, even decades. Once the cork is popped, it returns to its original shape in moments. The same resilience is present in cork flooring; it just springs back.

Lexington MA ceramic tile is another popular choice in flooring for several reasons. First is the unquestionable durability of ceramic tile. When compared with carpeting and hardwood, tile has a much longer useful life. It is also completely fireproof, never giving off noxious fumes. Of course, ceramic tile is virtually waterproof as well, making it the ideal choice for areas likely to experience moisture such as a bathroom or kitchen in Lexington, MA. Ceramic tile is also highly resistant to signs of wear and tear. Foot traffic that would be obvious in a carpet or hardwood floor will remain undetectable in tile for decades. Glazes and substances can also be added to tile in order to make it virtually slip proof, an important consideration in Lexington, MA. Floor installation of tile can withstand a wide range of temperatures, is stain resistant and incredibly easy to clean. Patterns and colors on ceramic tile are safe from the sun's rays as they do not dull or fade even in the summers of Lexington, MA. Ceramic tile is resistant to all chemicals and is quite hygienic when compared to other choices.
