Article published on November 25th 2011 | Home Improvement

Are you thinking spring yet? If youâ€™re like us youâ€™re ready for all of this snow to melt, so you can sta living outdoors again and enjoying your Okanagan backyard!

We get a lot of questions from Kelowna residents around this time of year about building new patios and outdoor spaces and we always encourage Okanagan clients that this is a great time to start planning the construction of your outdoor living space.

If youâ€™re dreaming of a great concrete summer patio or outdoor space then stamped concrete is a great option for you to customize and define your outside living space. Stamped concrete provides you with that high end look and feel and isnâ€™t as time consuming or high maintenance as tile or pavers.

Stamped concrete is easier to maintain then typical paving stones and with the variety of custom stamped concrete patterns and concrete color finishes available today you can make your stamped concrete blend in with virtually any dÃ©cor.

At Desert Crete concrete we will visit your home or business site and discuss your project in detail with you. We have years of experience and plenty of ideas that will help to benefit your backyard project, including space planning, grading and we can even open your eyes to areas of your yard that you may have overlooked!
