Article published on March 12th 2012 | Home Improvement

Conservatories are a convenient way to add value to your home without spending too much of your money. Based on the type of conservatory you purchase, the required expertise is applied to construct it. You can always take use of the professional help but if you want to cut that cost you can build it yourself. But there are conservatories like Florida rooms that are not easy to build. They require proper knowledge of carpentry and good skills at building a structure. Amateurs face a hard time at it. These require UPVC constituents, some optional materials such as wood, brick, cement, etc. that have to be treated and molded into proper shape so they can be assembled into a meaningful room. These tasks are difficult to perform without proper carpentry skills. If you donâ€™t have sufficient knowledge about carpentry then donâ€™t be dishearten. Go for an easier way with Do It Yourself (DIY) self-assembly conservatories. These contain solarium parts that are ready to be out into a proper structure and are easy to assemble even if you are a beginner. It usually contains UPVC, doors, corner posts, connecting strips, flexible corners, roof panels, bolts, screws, and the best part is step by step user manual. These are excellent option for those who want an extra living space but did not know how to proceed with fulfilling their wish. These have become very successful and popular among home owners.

Conservatories types:

Traditional conservatories prices are usually made from PVC or hardwood. These include Edwardian, Victorian, and Georgian types. But with the advancement in building techniques more and more people are moving away from traditional conservatories to more contemporary design of conservatory.

Contemporary conservatories are a solution for such home owners who donâ€™t want to apply classic or traditional conservatory designs to their homes. These are best alternatives to suit your modern home design needs. These conservatories can be tailored to the needs of the home owners.

Orangery conservatories have a flat roof area with lesser area of glass that offers more privacy to the home owners. These have one or more lanterns set inside it. These are usually made of hardwood.

Conservatory shapes also differ from one to another. Some common shapes include:

Lean-to style conservatories are one of smallest types and also the most basic. It is much cheaper to build and also makes the best use of a small and limited space. If height of the conservatory is restricted by the height of the home then these are best suitable for you.

Gable ended style is more suitable for old than modern homes. These are applied to the traditional conservatories prices . Double hipped is pitched in style and will accommodate any height restrictions.

P shape styles are ideal for large homes. These are divided into a vertical lean to design and an attached semi-circle traditional design.
