Different Kinds of Roof Problems and How to Deal with Them

by Richard Boles

Article published on May 3rd 2012 | Home Improvement

You need to base your decisions on factors that you want in your roof Whether you want a brand new roof or a replace the old roof of your house,. For example, your roof must be strong enough to withstand local climate if you want to live comfortably in your house even during rainy days, when water can wreak havoc on your roof.

Water is one of the most powerful elements of nature. The clear, tasteless, and odorless liquid doesnâ€™t look like it canâ€™t pose a threat, but even small amounts of water on the wrong spots can cause a good roof crumbling down. You need a roof that designed withstand water or moisture damage. You can do this by getting efficient waterproofing services, especially with flat roofs that do not have shingles or tiles to prevent water from seeping into your home.

Water can put a roof under a lot of wear and tear, especially during rainy seasons. During a rainy day, water can accumulate in some areas of your roof, often causing problems like rust spots or mold infestations. To avoid this, your roof needs an efficient gutter system to allow rainwater to flow off the roof as fast as possible. However, you need to make sure the gutter is free from debris to avoid clogging it.

Sunny days bring about a different kind of problem. Your roof has to be designed to maximize indoor ventilation and keep indoor temperature down. Summers can be very hot in Miami, so popular roof designs are either shaped to channel cool air into the house or vent out warm indoor air.

Other homes use roofs that absorb less heat than other roof types. Many roofs in Miami have shingle roofs inspired by the Mediterranean-style roofing popularly used by Floridaâ€™s colonists back in the old days. A roofing contractor Miami residents hire would recommend sturdy clay tile roofing because these tiles work remarkably well in Miami's tropical climate. However, Miami's exposure to heavy rainfall and hurricanes require properly reinforced tile roofing.

Some roofing contractors Miami residents hire know that some customers are concerned with what rain and storm can do to their tile roofing. They can recommend asphalt shingles, which are made of fiberglass covered in asphalt and granules. These shingles are strong, capable of withstanding strong rains and falling debris during powerful storms.

Some roofing contractors Miami FL residents hire also recommend metal roofing. Metal roofs are resistant to wind, and are fairly resistant against rust and fire damage, making them a safe roofing choice. For more information about roofing materials and installation, you can visit GAF.com.
