Enjoy Great Energy Saving Features with Dimplex Electric Fires by Nathan Shipley

Article published on March 5th 2012 | Home Improvement

In these modern times energy prices are rising year-on-year. It has never been more important for homeowners to look at cost effective ways to reduce their energy usage.

Dimplex electric fires are an ideal option as they can provide a number of energy saving features. These can help you to make the most of your money and save on your energy bills.

Energy Saving

With Dimplex electric fires you can take steps to save energy in your home without cutting back on your heating. This will save you money and will also help you to reduce your carbon emissions as well. Dimplex electric fires can offer a number of advanced energy savings features including:

- Dimplex electric fires can offer a fantastic 100% efficiency. This means that at the point of use no fuel energy is being wasted.

- Many older designs of electric and gas fires are actually very inefficient. This means you are burning energy that you are not actually benefitting from.

- With the 100% efficiency from Dimplex electric fires you will only be burning the fuel that you are directly benefitting from in terms of heat for your rooms.

- Dimplex electric fires offer advanced room-sensing thermostats. These constantly monitor room temperature and make adjustments to maintain an optimum temperature.

- This means you will not be overheating rooms and can choose the temperature you want your rooms to be heated to at all times.

- With Dimplex electric fires you can also choose to enjoy the welcoming flame effects without using the heating elements.

- This means you can fill your rooms full of the comfort of the flame effects on warmer evenings (or when your central heating is on) without actually heating rooms as well.

- The independent flame effect uses very little energy and creates a wonderful welcoming atmosphere for rooms.

- LED bulbs are also fitted to select fires in the Dimplex range. These types of bulbs are much more efficient than conventional bulbs and help to save energy.

- Studies show that LED bulbs can run at just 14 watts per hour. This means if you just use the flame effects (without the heating element) then the running costs would be as little as Â£2 per annum for average usage.

Electric Fires for Your Home

Dimplex electric fires not only work efficiently but they also look great too. They can create a real focal point to rooms without all the fuss and hassle of fuel burning fires. With Dimplex electric fires you can get very realistic flame effects. This means you can enjoy all the comfort of fuel burning

fires with the additional benefits of the convenience and efficiency of a modern electric fire.

There are a great range of Dimplex designs to choose from. You will be able to find the perfect look for your rooms whether you like traditional fire surrounds or ultra-modern designs.
