Favored Siding Material Options for Home Exteriors

by Anthony Blommel

Article published on March 14th 2012 | Home Improvement

Selecting the siding material to utilize is among the toughest tasks in home exterior upgrades. After all, selecting among the several siding options offered today can be difficult. All of them are long-lasting and appealing, but only some of them can meet the needs of your home. Take into account that even a simple siding replacement project can cost you a lot, so you need to be be careful when picking a certain material. Below are several siding kinds that you can consider utilizing:

Wood

Wood sidings can offer the aesthetic attraction that you require for your household. The vivid color of varnished wood can captivate the attention of individuals passing by your house. Wood also gives your home that very homely appearance. Wood also works as an efficient insulating materialâ€”it can effectively block very hot or cold weather and modulate indoor temperature. However, wood sidings demand frequent servicing to maintain their beautyâ€”they should be varnished and sealed to keep moisture, heat, and strong winds from damaging it.

Aluminum

Compared to wooden sidings, aluminum is more resistant to moisture and fire damage. Aluminum is a lot easier to take care ofâ€”it doesn't need to be waterproofed or cleaned as much as wood does. Nevertheless, the paint may peel off after a couple of years, so you might need to apply a new layer of paint every now and then. Aluminum also works as a great insulator, helping you reduce heating or cooling costs by a significant amount.

Fiber Cement

As the name suggests, fiber cement is a material made from a combination of cellulosic fibers, cement, and sand. Fiber cement patterns after the look of wood, so it's a great alternative to wooden sidings or roof tiles. Fiber cement is among the most in demand siding options these days, so it isn't very difficult to find them. In fact, virtually any Hardie siding installation specialistcan help you purchase it for your home.

Brick

As the hardest siding material offered, brick siding makes a highly tough exterior. When correctly installed, brick siding can last for for years. Brick siding doesn't need considerable maintenance. Nonetheless, the sheer weight of the material makes installing and repairs more tedious. If you are thinking about putting up brick sidings, consider contracting James Hardie siding installation specialists to complete the job.

Vinyl

Besides being light and visually attractive, vinyl siding is also very inexpensive. If you are on a tight budget, vinyl siding is a superb choice. Nonetheless, the cheapest vinyl sidings are typically prone to cracks and fire damage. To acquire leading quality vinyl sidings, employ licensed siding contractors you can trust.
