While various styles of mattresses are available, one of the most popular ones today is the Memory Foam mattress topper. When considering the various types of mattresses available, here are some of the features that they consider when weighing the pros and cons of toppers:

1. Theyâ€™re extremely mobile

One likely wouldnâ€™t consider hauling his or her big and bulky mattress, on business trips and vacations. However, an alternative is to choose a Memory Foam mattress topper. Travelers often complain that the mattress provided by their accommodations is too soft or too firm. However, they can get that Goldilocks â€œjust rightâ€• feeling, by simply tossing their topper atop the bedâ€™s main mat This can allow sleepers to get the same solid nightâ€™s sleep that theyâ€™d get at home on their main Memory Foam mattress.

2. Theyâ€™re available in different thicknesses

This issue regarding a Memory Foam mattress topper is more complex than it might seem. Those toppers that arenâ€™t extremely thick tend to have inferior quality. However, thatâ€™s not always the cas Sometimes companies offer toppers that differ in thicknesses, to provide differing amounts of support. Some people might prefer sleeping on toppers that are three inches thick, while others might fancy those that are four inches thick. However, one should certainly avoid toppers that are only one inch thick. These toppers tend to have significantly less quality than thicker toppers.

3. They provide the same benefits as full-size Memory Foam mattresses

This is especially beneficial when youâ€™re on the road and want to enjoy the benefits of sleeping on a full-size Memory Foam mattress. Like the full-size version, a Memory Foam mattress topper conforms to the contours of your body as you sleep. As its name recommend, the foam â€œremembersâ€• that particular position until you shift your body. Afterwards, the foam then realigns itself. This technology was actually designed by the USAâ€™s NASA space program. The goal was to provide astronauts with more safety and comfort as they launched from the space shuttleâ€™s pad, and then later reentered the Earthâ€™s atmosphere. Even if you have no intentions of becoming an astronaut, today you can still enjoy the benefits that Memory Foam toppers can provide.

4. Theyâ€™re hypoallergenic

This is one of the key features that todayâ€™s shoppers are looking for in a mattress. Allergic reactions to your mattress can definitely prevent you from getting a good nightâ€™s sleep. Fortunately, memory foam mattresses are hypoallergenic, which is yet another benefit of such toppers.

5. Theyâ€™re cost-effective

A Memory Foam mattress topper is much more affordable than a full-size mattress. So if one would like to enjoy the benefits of a Memory Foam mattress, but avoid the price tagâ€”a Memory Foam topper is an excellent alternative. It can even help to make mattresses that are too soft or too firm, more comfortable. Shoppers can get more mattresses for their money.
