Guide to Replacing the Windows of Your Maryland Home by [Kristopher Diss](#)

Article published on May 21st 2012 | [Home Improvement](#)

When the time comes that you need to replace your windows, you shouldn't just tear your old window out and hammer in a new one. Not only would this result in a gaping hole in the side of your house where your window used to be, your lack of expertise and preparation would lead to a lot of problems down the road. Knowing what you need and how much you're going to spend is an ideal way to prepare.

The costs that come with replacing your windows can be substantial, which is why you need to understand first why it is necessary to replace the windows in the first place. Broken or inefficient windows let the elements in and subtract from your home's curb appeal. Aside from these, these windows also reduce your home's insulation, resulting in more energy costs for you. To prevent this from happening, you need to replace the windows in your home and regularly maintain them to prolong their lifespan so you wouldn't have to replace them again anytime soon.

Getting replacement windows for your Maryland home can be easy on the pocket, provided that your home is less than 20 years old. It is easy to find cost-efficient replacements for newer-model windows because these are usually standardized when it comes to size and shape. There are different window types and materials available, and installation costs don't vary that much regardless of material.

The usual materials used for newer-model windows are wood, vinyl, and metal-pane. Wood and vinyl are on the high end of the price spectrum, averaging at around \$500, while metal-pane windows cost around half that price. You can usually install replacement windows yourself but if you can't, installation costs are relatively inexpensive.

Replacing older windows, on the other hand, is much more time-consuming and expensive. Most old windows Annapolis houses have, for example, are odd-shaped, which means that before you can install new windows, the frame has to be resized to accommodate newer-model windows. Labor fees for this type of work can be steep.

When shopping for replacement windows Bethesda retailers sell, for example, for your old-model window, it is better if you have contractors customize an entirely new window. Replacing old-model windows with newer ones might destroy the overall appeal of an old house. Having a contractor customize a window to add to the appeal of the house is a better idea, though it could be a bit expensive.

If you're not sure what type of window you need, or if you have any other home problems, contact a contractor that provides roofing, windows, or siding Bethesda and other Maryland residents trust.
