Heated towel rails â€“ Benefits and types by Marry Robins

Article published on August 1st 2012 | Home Improvement

Centrally heated towel is a radiator that is specifically designed to hold towels and also provide heating to the room. These towel rails are not only serves the purpose of drying towels but it also gives you the warmth ones you take the shower. Most of the people use radiators but you can also choose heated chrome rail as they will not only offer you warmth but it will also help in reducing the mildew and mold by minimizing condensation. With the help of these rails you can also improve the look of your bathroom and make it more spacious. Depending on your choice you can either choose a chrome or stainless steel rail.

Heated towel rails plays an important role in a bathroom and it has become an essential part in the modern bathroom. They add luxury to the bathroom and to buy these heated rails there are some important considerations that you need to keep in mind. First thing that you need to know are the types of towel rails that are available in the market so that you can choose the one according to your needs. Following are the types-

Electric Rail â€“ If you are looking for a rail that can be switched on and off whenever you wish to then this can be the great towel rail option for you. With the help of this rail, you can warm your towels in summers even when the central heating systems of your house might not be in use.

Plumbed- in rail- In case you want to use heated rail only in winters than plumbed in rails can be the best option for you as these rails will be plumber with your central heating system and will not work as an independent heating source.

Dual fuel rail- As the name itself suggests, this is the best option from all because you can use it both as a electricity and a central heating system, depending on your needs and requirements.

Once you decide which towel rail you want to purchase for your bathroom, next important task is to choose the right material. There are different types of materials that you can find in towel rails, you can choose from steel and brass. However, if you wish to use these rails for long run then brass is the best material you can choose but brass is a little expensive than the steel ones. The only reason that they are expensive is that they will last longer as compared to steel and they low on maintenance. Whenever you choose a heated towel rails, make sure you choose it according to the size and the color scheme of your bathroom. Because there are plenty of designs and color schemes available in the market, you will have wide range of options to choose from. Whatever you choose, always make sure that you make a choice that will last longer and never go for materials that are cheap as they wonâ€™t last longer.
