Home Improvement: the Advantages of Using Vinyl Siding by William Gulliver

Article published on February 28th 2012 | Home Improvement

For home improvement projects such as remodeling or renovation, many homeowners nowadays prefer using vinyl sidings. If you are checking the market for home sidings and still uncertain of what material to use, then consider vinyl siding. Using vinyl siding can give you certain advantages over any other type of siding material. Here's a look at them.

Affordability

As a plastic exterior cladding material, vinyl siding is more affordable compared to other types of materialsâ€”about 25% to 50% less expensive than aluminum and wood siding. This means with wooden siding, you spend twice as much than when you use vinyl siding. Furthermore, vinyl panels come in standardized sizes and shapes. This makes them easy to install or replace. If it's your first time to install vinyl sidings, itâ€™s best to ask help from a professional to do it.

Low Maintenance

Vinyl sidings are known for their low maintenance quality. They are easy to clean, needing only the periodic washing using water and mild detergent. Unlike wood or metal siding, vinyl siding does not rot, rust, split, or peel. You don't need to do any scraping or painting. Additionally, if a single panel of vinyl siding is damaged, it can be easily replaced. With little upkeep requirements and affordability, you save money when use them.

Color Choice

Vinyl sidings are pre-fabricated in a variety of thickness, grain, and color. This means that you have more choices when you want to enhance the beauty and value of your home. Moreover, the color is baked through the vinyl. This means the pigment is mixed along with the PVC resins that vinyl is made of, allowing vinyl to have more color retention. For your New Jersey vinyl siding needs, consult professional advice on the specific vinyl thickness and color that makes it resistant to scratches and blemishes.

Better Protection

Since vinyl sidings are known for their durability, they offer better protection for your home exterior. Moreover, they have perforations so that allow moisture to escape if properly installed and ventilated. Vinyl acts as a good air and noise barrier, cutting noise by about 45%. The vinyl siding NJ offers is also resistant to mold, mildew and insects.

Energy Efficiency

Since your home's heating and cooling needs make up for 50%-70% of energy consumption, you need to invest in house materials and appliances that are energy efficient. R-value is a measurement of how successful a substance is in minimizing heat loss. Using vinyl sidings can drastically increase your home's R-value. You can look for good New Jersey vinyl siding products in hardware stores found in the area.
