How to hang your canvas print by Andrew Bourke

Article published on June 21st 2012 | Home Improvement

Canvas prints are amazing thing to have hanging on your walls, and Iâ€™m going to give you a few tips on how to go about hanging them up and getting them in a really good spot to be able to achieve the most out of them.

One method of hanging a canvas print or canvas prints for that matter would be the most common way to hang allot of different types of wall decoration would be to simply us e a nail, that would be the easiest way to hang something on your wall but if you wanted to go for a more professional way of doing it so that its extra safe to then there is other types of hanging apparatuses that can be used for your canvas printing masterpieces as thereâ€™s nothing more self achieving than having something that you have managed to get yourself and to be able to securely have it fastened to the wall would be an extra bonus.

Another way of hanging a canvas print would be to have a wire or piece of string going from one side of the canvas print to the other side with nails attached at each end. This would create a shelf on the back of the canvas print then all you have to do is hammer some more nails into your wall and then rest the wire or string over the nails and this would be very effective, when doing so though you may want to have the sting tight rather than loose so that the string doesnâ€™t show above the canvas once hung.

The last and best way to have your artwork hung on your wall would be having the actual correct hanging kits that you can either buy separately from your canvas or some canvas printers provide them free of charge so that you can hang your canvas print with ease, this hanging kit basically a little bag than is made up of a metal plate that goes over the back of the canvas print frame and then you will have two pins and a hook that you can nail into the wall then all you do is rest the canvas print over the hook and then there you have it, one perfect canvas print made to perfect which is placed and hung perfectly to. I would recommend that if the canvas print you have is a very big one then I would repeat the process of having a few metal plate on the back for extra strength, most canvas print frames are very lightweight anyway as they are stretcher bar frames but still itâ€™s nice to have the extra strength there just to be safe. Then all there left to do is hang it in good lighting and then youâ€™re off to a good start and all you have to do is await your visitors to come and complement your work of art that is looking great along with hanging perfectly.
