Options for replacing your Conservatories Roofing by [Mary Porter](#)

Article published on July 17th 2012 | [Home Improvement](#)

Conservatories are difficult rooms to maintain a comfortable temperature in. They tend to be too hot in summer and far too cold in winter so become unusable at certain times of the year. This is mainly due to the conservatories roofing system that allows too much heat in in the summer and too much heat out in the winter so the correct temperature is never maintained. The majority of conservatories roofing is either made from glass or polycarbonate sheets. Polycarbonate is a more popular choice because it is cheaper than glass. The problem with using polycarbonate for conservatories roofing is that it has virtually no insulating properties so is not really ideal to insulate a conservatory.

For anyone who is fed up of not being able to use their conservatory due to the temperature inside then there is now an effective solution for making your conservatory a more useable space all year round. Investing in new conservatories roofing will insulate the conservatory making it warmer in winter and cooler in summer. These new roof revive conservatories roofing systems are fitted over existing conservatory roofing to provide a hassle free and quick solution for an effective way to insulate your conservatory and make it feel more like any other room in the main part of the house.

Investing in new conservatories roofing will not only help to maintain a good temperature all year round it will also mean that glare from above will no longer be an issue, there will be a vast reduction in rain noise and your energy costs will be lowered. The external look of the conservatory will be no different and the internal look will be improved. This effective type of conservatories roofing is made using a lightweight high performance insulation board made up of 19 layers of reflective and insulating materials. Cross ventilation stops condensation or sweating inside the roof area. The roof is then covered with plasterboard and skimmed so you can finish it as you desire with paint or paper.
