Article published on June 21st 2012 | Home Improvement

If you have ever visited a tip to drop off bags of rubbish, or taken your garden waste to a recycling facility, then you will have seen retaining walls. These sturdy and moveable walls are the devices which are used to ensure that rubbish stays in one place and as such, retaining walls need to be made from heavy material which is not going to be easily moved, and as well as this retaining walls should be sturdy enough to withstand the many different types of weather an outdoor tip might be hit by.

If you run a recycling or rubbish disposal company then you might be looking for new retaining walls for your premises, and the key thing you should keep in mind is that retaining walls should be sturdy and able to withstand even the heaviest weight and largest amount of rubbish.

Most retaining walls customers use the walls to fence in loads of rubbish and as such, retaining walls need to be made available in various sizes. As well as this, retaining walls need to strike the balance between being heavy enough to withstand a large rubbish pile and also being able to be moved around to accommodate more debris.

If you are looking for new retaining walls then visit us here at Poundfield and check out our extensive and useable retaining walls range. We stock a large selection of retaining walls and those coming to us for retaining walls can benefit from our years of experience and the advice our knowledgeable team can provide.
