Article published on February 27th 2012 | Home Improvement

If you are planning to have your home renovated, it's recommended to have skylights for your house's ceiling. A skylight is considered an architectural design where windows are installed in bathroom or bedroom ceilings. This type of window is used in house spaces that do not receive enough sunlight and air. This kind of window is very important because it is responsible for ventilating or circulating fresh air in secluded areas of the house.

Another main function of a skylight is to minimize and regulate electricity usage. Instead of having extra light bulbs, you can install a skylight and enjoy a free light source during the day. Skylights also regulate indoor temperature and make rooms appear brighter and more spacious, giving you energy saving benefits plus comfort and convenience inside the home.

However, a skylight may function differently from one place to another depending on the region's climate. What if you live in an area that is too hot or cold? For extreme weather conditions, skylights can bring trouble if they absorb too much heat or let cold air in. Regardless of your area's climate, however, full benefits of a skylight can be achieved when it is properly installed or mounted with accessories that boost its function.

Considerations for Handling Skylights in Hot and Cold Areas

Installing shades or blinds for a skylight can help deflect sun rays especially during midday. Some shades are specifically manufactured for skylight usage. If your skylight is located way above the ceiling, you can install remote controllable for your convenience. You can also visit hardware stores to see if they offer shades with the same size as your home's skylight. If not, you can consult your roofing contractors NH locals recommend to request for customized skylight shades blinds.

Filling or sealing your skylight properly is also important. An inefficient skylight produces problems with extra air, water, or sunlight, leading to a hotter or colder indoor atmosphere. When leakages are left unattended, they can damage the skylight material. If your skylight is experiencing similar issues, roofing contractors NH homeowners trust can inspect the problem and identify if it needs patching or sealing.

If you choose to install a skylight in your living room, a shield glare would be appropriate to complement it. For bedroom or theater areas with skylights, it is recommended for blackout shades to be installed to completely block sunlight when it gets too bright. If you want a skylight that complements your ceiling's color, you can consult your roofing contractors NH authorities recognize and ask about the availability of your preferred skylight color.
