Some helpful tips for kitchen fittings by Glyn Jones

Article published on June 29th 2012 | Home Improvement

There are so many things that you can do with the kitchen design. A few of such things are mentioned below:

Tip 1: Make your own sketch or plan: Before you ask your designer / fitted kitchen specialists to produce a 3D design of your kitchen, create a sketched plan of the desired fitted kitchen. It doesn't matter how good you might be at drawing, it can help you to supply quite aspects that you desire to include noted down.

You are able to take inspiration out of your current kitchen or through researching on the internet and in gossip columns. An artist will appreciate this starting point.

Tip 2: Take space into account; how about to produce more room for the kitchen by extending it? An extension cord enables to have an open plan fitted kitchen and dining / living space. Your kitchen fitter Caterham or fitted kitchen specialist should be able to counsel you around the best way to maximize the potential of your kitchen area space.

There are numerous approaches to layout any kitchen so it's vital that you explore all options along with your kitchen expert.

Tip 3: Water supply and further electric power points, under floor heating; if the budget is tight then do not move about with the sink, gas pipes or waste since this adds substantially to kitchen installation time and price. When it is needed and budgeted for, then you've got more possibilities for creativity.

Your requirements for plugging in large appliances such as washers and dishwashers, along with smaller utensils, such as toasters etc. will determine how much power point sockets that you'll require.

Under floor heating ought to be planned in advance and discussed together with your kitchen remodeling company.

Tip 4: Flooring will give your home an extreme facelift but needs to be planned well in advance since it has implications for plumbing and under floor heating etc. Wooden floors, laminate, tiles and vinyl are selections for your kitchen.

Tip 5: Lighting design; a hanging light and spotlights create two different atmospheres. In kitchens it is important to consider both practical safety and design.

Lights over sinks and preparing food areas can be extremely helpful, as well as enhancing the aesthetic.

Tip 6: Kitchen unit style / worktops; the option of unit style is entirely your responsibility however you must look into long or short term kitchen use. In the short term you would put in a practical kitchen using a neutral look and colors. A kitchen that incorporates modern appliances but attracts wide spectrum of buyers is important in the event you decided to sell the house in just a couple of years.

In the future kitchen plans you need to be certain your home style and color will correspond along with other linked home areas to create continuity in your property. An up to date kitchen blended

with traditional furniture in open lounge wouldn't normally necessarily appeal to you in order to your guests.

Tip 7: Appliances and sink choice; Bet on top quality appliance even at rental properties. The cheapest appliance costs twice or three times over in order to change them within 2-3 years. Mid or top end appliances can last longer.

Right handed people should you prefer a sink which is left drained and visa versa. This really is worth keeping in mind.

Tip 8: Kitchen ergonomics; Practicality is everything within a kitchen and so it is very important that there be described as a logical layout based upon your meal preparation process.

It could seem sensible to include a cooking area close to your cooker using a sink nearby; you don't want to must carry dirty plans a long way.

Keep your carpenter Dorking understands your cooking processes when designing your home layout.

Tip 9: Fitted kitchen baseline units; Meticulous planning of units will ensure that there are enough room to deal with all your kitchen cookware. There are many storage options available.

Tip 10: Hiding boilers; Exposed boilers can ruin a fresh kitchen design. You can disguise it by encasing it inside a matching kitchen unit. With the budget you can even consider moving the boiler out of the kitchen altogether.

The moving of a boiler is really a complicated process and would require full discussion prior to going ahead with. Disguising the boiler with matching units or false walls might be a better option.
