The Myriad of Uses on Leveling Feet by [Kaim Stefen](#)

Article published on August 16th 2012 | [Home Improvement](#)

Leveling feet are becoming more complex in their choices as more elaborate and modern features come on. There are numerous applications which make use of leveling feet and there are many types of feet that require a leveling of items and equipment.

Options

There are basic feet with simple features while elaborate ones have special features such as an adjustment nut at the base for easy underneath adjustment. Modern ones have a hex and slotted head which allow top adjustments when bottom adjustments are difficult or impossible. Heavy items which allow underside adjustments may use articulating feet as these would not require extra force to move the item for adjustments.

As modern technology brings on more items to enhance consumers'™ lifestyle, there would be a growing need of leveling feet. Hence, manufacturers are already expanding the leveling feet product line to cater to the different types of applications in the home or industry. There are now different versions of leveling feet to fit different applications; they are the bumper feet, glides, carpet grippers, stick-on and adjustable feet.

Uses

There is a myriad of uses for leveling feet. One can find them in the home, office, commercial sector and even the industry. Most homes that are concerned about the flooring would put on leveling or adjustable feet on their furniture and appliances. Such feet are also used when there is an uneven floor or ground in which furniture pieces need to be set or positioned. Leveling feet can put the furniture in the desired stable position with the feet pieces adjusted to the right level.

The office is another environment where one would spot leveling feet. With the usage of such feet at the office, workers can work at their desks comfortably without the annoying desk squeaks and screeches. Such stability of office furniture is crucial for high work productivity as one might find in an architect's™ office where there are plenty of important plans and drawings to be done.

Office floors that are usually kept spotless and smooth would have its reception area or guest room furniture wearing leveling feet. This would allow the office guests or customers to sit and wait comfortably without the chairs or tables being moved or shifted.

The commercial sector is another heavy usage environment for leveling feet. Sidewalk cafés and restaurants use a lot of leveling feet to keep their furniture in stable position so that their customers would feel comfortable while enjoying their drink and food.
