Trench Drains are Vital in Many Industries, for Safety and Cleanliness by [Sylvia Lambert](#)

Article published on June 8th 2012 | [Home Improvement](#)

When it comes to industrial flooring applications, there are innumerable types of floors, as well as a wide variety of companies to choose from. However, one thing many businesses need to take into consideration is having proper trench drains installed, to ensure safe and proper drainage of all types of liquid materials. For this reason, you will want to find a company that can provide you with innovative and well-designed trench drains that will function over the long-term, but provide you with low costs, without sacrificing quality. With an extensive selection of trench drains available, you can have the ideal drain installed in your business, regardless of whether it's food processing, heavy industry, or anything else. You can quickly and easily have these trench drains installed, with a 100% customer satisfaction guaranteed.

No matter whether you have a new floor you are installing, or need your floor and drainage system refitted or redesigned, the best trench drain company in the US can provide these services to you, quickly and easily. They can help to decipher the best avenue to take, to ensure that your current drain system is more efficient, or whether it needs to be replaced altogether. You can have custom drains installed, regardless of your needs. You will always be able to speak with an experienced and knowledgeable engineer, that understands how drainage systems work, and can provide you the most effective and highly developed design that will fit your every need. This is vital, for the protection and safety of your employees, as well as your business.

Other very popular and vital types of trench drains include those for food processing applications. These are generally made from stainless steel, and always maintain compliance with all SQF and other food safety auditing specifications. You can always have heavy-duty, cast-iron drains installed, which are spectacular for heavy-duty traffic, and heavy, corrosive and dangerous solids or liquids. In certain situations, you can also have sloping or point drains installed, which are generally an ideal option for refitting of any workspace, where your processes need new locations for the drainage, or resurfacing of your flooring. Another innovative trench drain is a pancake drain. These are perfect for areas where complete penetration of your floor is not in your best interest. As an example of this situation, would be a mezzanine. You can have trench drains installed in any type of facility where liquids on the floor are a vital issue.

This can include more than just food processing facilities, as trench drains are ideal for airlines, parking areas, food and meat processing areas as well as dirty floors. They are needed in pharmaceutical flooring, caustic processing areas, innumerable heavy industry floor applications, rendering and boiler room floors and chemical processing units. Trench drains are vital in all types of restaurants, whether traditional or fast food, medical and veterinary flooring, kitchens, loading docks, bakeries and much more. Any type of industrial application where there maybe liquids on the floor that need to be drained away for the safety of your employees and your business, all you need to do is find the best trench drain company in the business to assist you.
