Article published on January 6th 2012 | Home Improvement

Have you ever seen the sunbeam hit your carpet and you see dust in the air? Your carpet acts as a filter for many particles (pollen, soil, dirt, dust, chemicals, contaminants, etc.) and this filter becomes over filled. Getting it cleaned is as mandatory as changing the filter in our water.

Residential Carpet Cleaning Services

Did you know your carpet has dust, dirt, and other toxic particles? These hazardous particles are capable of wrecking your respiratory system. It first begins with allergenic symptoms: wheezing, coughing, and sneezing â€“ and it eventually leads to chronic symptoms such asthma, and other respiratory problems. Carpet cleaning removes those particles allowing you to breathe clean air.

Residential carpet cleaning should normally be done once a year; except if you have factors such as: kids at home, seniors living at home, pets in the home, and if any of the house hold members has asthma or allergies.

Activities like home renovation or nearby construction are also particle producing activities. They create particles that get fall onto our carpet and eventually build up. Call us today and ask us about our carpet cleaning services.

Commercial Carpet Cleaning Services

Since we walk around in our office with shoes, we are bringing in dust, dirt, and other toxic particles to our carpet. Eventually these particles build up. Each time we step on the floor these particles rise up and enter into our lungs. In order to reduce our susceptibility to respiratory problems we should have carpet cleaning at least once every year.
