# Why You Should Consider Replacing Your Windows by Norbert Floth

Article published on April 25th 2012 | Home Improvement

Window problems need immediate remedy before they turn into a nightmare for your family. Small leaks, wear and tear, or corrosion along the window frames can cause you to double your heating or cooling bills â€“ as dents on window frames can cause moisture to seep in or heat to get out. These instances can be stopped by replacing your windows now.

Window replacement is costly but the problems you might encounter if you donâ€™t face it now can be costlier. To know whether or not replacing your windows makes sense, consider some common indicators. If you place a lit candle on the sill and notice the flame flicker or get blown inward, wind is leaking either along the frame or through a broken pane. Minor problems like this can be fixed by refilling the caulk, but if the leak results from a deeper unseen damage, the entire window must be replaced.

During winter, your windows are prone to freezing just as other exterior structures are. But if ice begins to build up even on the interior of the windows, it means either there is insufficient ventilation in the house or the windows are poorly insulated. Before the next winter comes, consider replacing your windows to avoid losing needed heat.

Corrosion along the interior window frame indicates moisture formation. You can simply clean away the rust and coat the steel frame but that would not remedy leak problems, which cause the moisture formation. Later on, you will find it hard to keep up with rusting until you see window replacement as the only solution.

Homes in places with humid subtropical climate and occasionally cold winters, for instance, Atlanta, are prone to climate-related window damage like corrosion. Depending on the type of window, damage may range from simple hail crack on the glass pane to broken hinges or rollers. Wooden window frames, when exposed to rain, can rot and grow molds and mildew, which later on can start leak problems. Replacement windows Atlanta homeowners purchase are the best solution for these types of damage.

As years pass, your windows become harder to close or open. This is due to damage on the windowâ€™s opening mechanism. Broken hinges or rollers will limit the windowâ€™s functionality, and the best solution for this would be replacement windows Marietta homebuilders recommend.

If you would like to read more about replacement windows Atlanta has to offer and when to install them, you can check WiseGeek.com. This website provides more in-depth information about window replacement, including factors to consider in replacing home windows. It also provides interesting information about home remodeling that may encompass window replacement.
