Article published on December 24th 2011 | Home Security

Are you planning to replace your old kitchen countertops with a newer variety? If your answer is in the positive, you must be in a fix in deciding which company to choose, particularly in todayâ€™s market scenario where you have so many options to choose from, where almost everybody is coming up with newer innovations and demanding to be the best in business. From the quality point of view, it can be said with sheer certainty that wilsonart laminate is one of the very bests in this regard and is known to produce high glass solutions to your countertops needs.

Coming in a large array of shapes, colors and designs, this company made countertops is highly stylish and copes well with a large variety of room dÃ©cor. The installation process is rather simple but a few steps need to be followed for best results. To start with, make it a point to shut the water lines as well as the valves that connect to your kitchen sink prior to installation of the kitchen countertops. The electrical equipments and gadgets should also be removed from the mains to be on the safer side.

The installation process involves taking out the older countertop followed by installing the newer countertop. The older countertops can be removed by simply unscrewing the screws followed by the measurement of either cabinet. Try to take an extra 3/4 part extra on both sides. Keep the tape on the back side of the Wilsonart laminate to eliminate the risks of damages on the laminated side. Measure the sink area using a tape and mark a line along which you will cut. Finally, place the screws at the right places to tighten the countertop laminate sheet
