Give a stunning look to your nails with UV gels by Roger Lopez

Article published on April 3rd 2012 | Humanities

Generally, the UV lamp is a light emitting tool and it provide energy to nails that sets everything in motion. This motivating technology is essentially in the gels that consolidate almost immediately when exposed to UV light. The gel for nails is constructed up of simple molecules that function as building blocks. They react and transform into strong chains when exposed to UV light. These gels are implemented just like a customary polish but with one substantial difference of opinion: under a UV nail dryer, they can be cured in less than 30 seconds.

Three to four UV bulbs are used to apply UV nails. The bulbs used are basically designed with inner coats that specially filter UV-B light, which is believed to be much more detrimental to the skin than UV A. The foremost practice requires use of four 9 watt bulbs to emit a total of 36 watts. UV nail lamps are equivalent to tanning beds and hence this type of dryer was tested by experts after reading these claims.

They acquitted an independent testing ground that tested on a variety of nail lamps together with the four 36-watt model which was found in 90% of all nail salons. Sensitive UV detectors were located within the dryer to evaluate the release of UV-A and UV-B light rather than of hands and confirmed that the filtrates built up into UV bulbs take out just about all UV-B.

These UV nails were found safe when used as directed UV nail lamps with a brief exposure to natural sunlight. The exposure to UV-B light is equal to spending a surplus 17 to 26 seconds daily under the sun during the period of fourteen consecutive days with the single application on two hands. UV light in a vehicle than under the UV gel nail dryer is found more as compared to driving a car.

A nail kit with UV gel nails, nail cutter and other polishes make it a absolute kit and UV Gelish nails as well make obsolete for other nail polishes. Dissimilar to a regular polish, gels last up to 2 to 3 weeks without splintering or peeling off and get dry in just 30 seconds. Hence go for gel nails to give a stunning look to your nails.
