Article published on December 13th 2011 | Insurance

Sometimes the unimagined situations are created in life which may not be handled by us. We need to someone who helps that time and handle the critical conditions. That time we don't understand that what is correct or wrong? Situations may be various types of like damages such as water damage, smoke or fire damage, earth quake etc.Water damage is a number of things depending on whether the process takes place slowly or very quickely.The cause of water damage is the home environment i.e. appliances failing (range from washing machine breaking down causing water to pour out which can ruin carpets and floors, toilets overflowing caused by dishwasher leaking or even plumbing problems caused by cracked or broken pipes that can spoil walls, ceilings and floors, pipe leakage or a broken line for water damage can also cause this problem, these kinds of water damage generally go unnoticed i.e. no one knows that which time this situation is coming). Water damage will prove the dangerous for our life and our building structure. It is done by water intruding where it will enable attack of a material or system by destructive process. Water damage creates a big condition to everyone. Due to water, your home, building, fields etc are damaged and finish. The major form of water damage is flood. Flood creates very typical condition and it is impossible to stop this but we can prevent this from external things. Water damage affects a large number of damages to property as well as systems etc. Water damage can also damage electrical wires or equipments.

Categories of water damage:-

Clean Water â€“ Clean water refers to a source of water that does not pose substantial threat to humans. Clean Water is normally the product of broken water supply lines, sink or tub overflows, or appliance malfunctions involving water lines.

Grey Water â€“ Grey water refers to a source of water that contains a significant degree of chemical, physical contaminants and can cause discomfort or sickness of exposed to or consumed by humans or animals. Grey Water is the product of toilet bowls with urine, sump pump failures, and discharge from dishwashers or washing machines.

Black Water â€“ Black water contains unsanitary agents, harmful bacteria and fungi or parasites, and may cause serious illness or even death if consumed by humans or animals. Black Water is the product of sewer systems, seawater, rising water from rivers or streams, or standing, stagnant water.
