Does Your Home Need Cordless Cellular Shades by Smith Williams

Article published on June 20th 2012 | Interior Design

Window shades are fast taking over the world of window coverings. Those days are gone when people sought window solutions in curtains and curtains only. In these days, who has the time and the energy to invest in maintaining the meters and meters of fabric? Who has the time to think about perfect draping and fall, when you have simpler and better solutions in window shades? It feels that the latter is somehow custom made to benefit the victims of 9 to 5 schedule and those who have more important things to take care of than washing and ironing curtains.

Window shades are thus, here to stay. This is also one of the reasons why so many innovations and developments are happening to improve the existing shades. The top down bottom up shades can be mentioned as an example here. As the name itself suggests, this is one of those shades that can be pulled half way down or pushed half way up as per the needs of the owner. This is a sort of a genius invention in the world of shades that allows the users greater benefit by helping them manipulate visibility and entry of light in ways that suit them best.

Take for instance, if an owner wishes to block view from the outside yet wants the entry of fresh air and light, he / she can just pull the shade half way down the window. On the other hand, if the owner wishes to enable visibility from the inside to the outside yet block the afternoon sun, the shade can be pulled half way up from the bottom. There are no other window solutions that can be as perfect and as thoughtful as the top down bottom up shades.

Couple this with a newer and more innovative feature known as cordless cellular shades. These shades appear cordless; thus, allow a neater look to the interiors and look equally attractive and UN messy from the outside. While this takes care of the cordless part, â€˜cellularâ€™ refers to tiny air pockets that are present in the body of the shade. These air pockets act as insulators and tend to keep the room warmer during winters and cooler during summers. This goes on to save a lot of power bills that you may have ended up parting with. Top down bottom up cellular shades, can thus be the perfect window solution for any home.

These are the reasons why you would want these cordless wonders to take over the windows of your house. To begin with, you will have plenty of options as far as controlling light and visibility is concerned. You will have better temperature controlled rooms without having to depend upon spending electricity (the environmentalists would love you for that), your power bills will come down, your interiors will have a neater and more sophisticated look, it will suit any type of interior dÃ©cor whatsoever and . . . these shades are low maintenance and cost effective.
