Article published on July 3rd 2012 | Internet

A colocation data center can help provide stable and secure cloud computing for all users.

The right cloud service provider can make a big difference in accessing and backing up data online. Cloud storage solutions for businesses are quite a bit different than minor cloud services that back up an iTunes library or other small amounts of data. Most businesses have a good deal of information that needs to be stored and managed. Cloud storage lets users back up their computers online to servers that can be accessed from anywhere. Here at GNAX, we have a colocation data center for added security and easy access across the country.

Servers in businesses offer a data backup solution but can cost quite a bit of money to install and maintain. Using a cloud provider helps businesses cut down on IT costs because they will no longer need to purchase the hardware to keep their data secure. The colocation data center works by storing data at two different facilities because no hard drives are perfect. Each location has armed security and is surrounded by razor wire fencing. Users can rest assured that their data is well protected and easily accessible. There are multiple 10G Ethernet connections running to our locations to provide users with a secure and open connection.

Virtual machines can also access the secure cloud storage. The VPDC Enterprise is the VMware cloud and it offers rapid provisioning and gives users their choice of hardware. We have several different cloud options for businesses and users to choose from. Each facility is maintained by engineers to keep the power flowing and data accessible. More information about cloud computing and the services we offer is available at http://www.gnax.net.

About GNAX

With over 10 years as an industry leader in the southeast, Global Net Access (GNAX) operates two world-class data centers, AtlantaNAP and DallasNAP, offering mission-critical data center colocation and cloud services. GNAX provides superior technology solutions to a variety of organizations and industries worldwide.

Privately held with headquarters in Atlanta, GA, GNAX was founded in 1999 and has retained net income profitability since 2003. We are diligent in our financial management to ensure optimal operational support and disciplined growth.

Our plan is to grow continuously by providing industry-leading colocation, cloud services and applications with superior technical support and customer service in a secure, highly available, mission-critical data center environment.

100% customer satisfaction is our goal, which we achieve by providing 100% focus on the customer and providing customized solutions that will meet immediate, as well as future needs.
