Control and Protection with Palo Alto Networks, Palo Alto Firewalls and Secure Web Gateway by Conrad Lara

Article published on March 22nd 2012 | Internet

Corporationsâ€™ primary concerns are with controlling network traffic and protection against malware. Palo Alto Networks and Palo Alto firewalls have the ability to control traffic.

Organizations looking for control can rely on Palo Alto Networks and Palo Alto firewalls. Palo Alto Networks and firewalls can be deployed in different locations of an entity. With the networks and firewalls you can quickly use different applications.

Palo Alto Networks next generation firewalls provide solutions in various areas of businesses. Your perimeter firewall can safely be enabled to combine applications, users and content into firewall policy. New technology and applications can be enabled safely.

A companyâ€™s security team can now control what applications are used by which individual. Members of your security team can effectively convert applications into a controlled firewall policy. They will know the applications that go across the network.

Palo Alto Networks and Palo Alto firewalls permit your company to do more than allow or deny applications and policies. IT security can enable applications and users. Traffic can be scanned for viruses, Trojan, and other malicious malware.

QoS may be applied to specific applications, assigned groups and users. This ensures quality control of your companyâ€™s applications. It will block external proxies and P2P file sharing.

If your business is looking for control and protection against malware threats, Palo Alto Networks next generation firewalls is the solution to your security needs. Your business can be protected against known and unknown threats.

TrustWave Secure Web Gateway

TrustWave Secure Web Gateway has the most sophisticated protection against threats and deployment options. It ensures the companyâ€™s compliance and no data loss. No worries of malware potential threats.

Secure Web Gateway protects your network against malware to the highest. It protects against 100% of all malware. Your company doesnâ€™t have to be concerned with jeopardizing the privacy of confidential information.

With Secure Web Gateway, virtual appliance and hybrid cloud options are available. It extends equal security to remote and mobile users. It can be integrated into various network styles.

Corporations and businesses can now have security and appliance options according to their requirements. No more worries about emails or website content with malicious viruses and threats. Your company can now relax.

Palo Alto Networks and Palo Alto firewalls are the solutions businesses are choosing for their network control and protection. Having the maximum protections against malicious threats is a major concern for businesses. For quality and trust choose Palo Alto Networks and Secure Web Gateway for your web security.
