Discover the Lexus CT 200H F Sport Hybrid, the Epitome of Luxury Hybrid

by Meagan Melendez

Article published on February 25th 2012 | Internet

For anyone that is interested in luxury vehicles, but also has concerns for the environment, then you will want to discover the new Lexus CT 200h F Sport hybrid. This extraordinary vehicle has been precisely tuned to provide the maximum in dynamics and highly engaging driving experience. It also provides stunning, darkened 17-inch alloy wheels, and the classic F Sport style bumper and grille. The CT 200H F Sport also provides the ultimate in driving comfort, because of its electro chromatic, electrically retractable wing mirrors. These mirrors provided the ultimate convenience at the touch of a button, and this vehicle also proffers stunning and luxurious leather upholstery and heated seats, providing maximum comfort.

Despite the fact that there are many types of hybrid luxury compact cars available, Lexus provides only the most advanced hybrid luxury car available today. Every hybrid vehicle provides two separate power sources, which is often a combination of gasoline or diesel engine, along with an electric motor. These hybrids are often grouped into three different types, which are micro, mild and full hybrid. Lexus's full hybrid technology provides you the opportunity to power this hybrid luxury car by the electronic engine alone, the combustion motor alone, or both. The CT 200H F Sport is silently run by the electronic order alone when starting and driving at lower speeds. This produces zero CO2 emissions, and also provides maximum fuel economy, because it does not use any fuel at all.

The power control unit on this hybrid luxury car automatically chooses the best combination of engine power and electric motor power, in order to maximize your fuel economy and minimize your CO2 emissions. The full hybrid system that Lexus has created is highly intelligent, and provides you with the most appropriate power source at that moment, which captures the maximum energy available through your braking, which charges the battery. In so doing, it provides this hybrid luxury compact car the most powerful electric motor available on the market. With these benefits, for both you and the environment, your operating costs are drastically reduced because of your reduction in brake wear and higher fuel economy. What is more, the full hybrid technology that Lexus provides in the CT 200H F Sport hybrid is available, as well as two additional types of hybrid offered, micro and mild.

The definition of micro hybrid is that it is not a strict hybrid, because electricity from the battery is not used to move the vehicle. In addition, what is known as 'Stop-Start' allows a reduction in carbon dioxide emissions as well as a decrease in fuel consumption. The mild hybrid cannot be powered alone by the electric motor. They have a supplemental electric motor, which gives the engine additional power through acceleration. This motor is powered by a separate battery. Regardless of the type of hybrid luxury compact car you are interested in, Lexus offers the most innovative and unique hybrid luxury car available on the market, in the form of the CT 200H F Sport hybrid.
