Article published on July 25th 2012 | Internet

You might have suffered the long wait and sometimes even corrupted large file send over the conventional ways of file transferring. Also, the traditional ways of sending large file may not be safe to a great extent. They can draw in viruses and other thefts to your valuable system. Available FTPs and file transfer through E-mails have restricted file sizes and are slow with almost no tracking system at all. Your data is certainly very important and may require to be shared among your global clients, customers, or associates; but these conventional methods may fall short to fulfil your requirement of required speed, efficiency and control.

How fantastic would it be if you can send large files quickly? It is possible now through some ready to use file transferring utilities available on the web. They can be used without any hassles of downloading, installing and configuring space occupying software on your system. This kind of utility is available as a free trial or at an affordable plan. You can own a hosted filebox to maintain large file send along with complete activity log and backup. The versatility of its usage is not only limited to data file but also it allows you to send large files of photos with high megapixels and illustrated details. These large photo/video files can be simultaneously shared by many users without any extra charges or registration fees. Moreover, you can monitor the whole process of sending large file to keep a check on the efficiency and speed.

The exceptionally large file send are performed with fastest speed and typically 128 bit security that may not be possible using E-mails or other FTPs. With every successful upload of file, you get a confirmation E-mail and at the same time the receiver(s) are notified to download the file. This way, you have the absolute control over the file transferring process. Even the files that is as large as 2 GB can be instantly sent across the globe with total security!

The isolated file storage can also be availed on a dedicated service plan that provides high end security to the data that can only be used by your company as the data will be stored in the servers that are segregated from rest of the other servers. This way you do not have to worry about data leakage or unwanted viruses and spam. The unlimited bandwidth for sending large file ensures the fastest file sending.
