Article published on December 28th 2011 | Internet

Creating a copy of your important data files is very important, considering the safety aspects and confidentiality of your business. When you create backup files, you can recover important data that has been lost or stolen due to some reason. In case youâ€™re a Windows user, you can successfully access the Windows online remote backup service.

The Windows server system offers variety of options when it comes two determining a storage strategy. Different versions of MS Windows Server come with restricted backup utility services however you might require external storage services for enhanced security. The latest version of Microsoft- Windows 7 offers a unique system application for remote backup service. It is known as â€œBackup and Restoreâ€•. This service is used for scheduling routine scans and creating customized backups of existing data files on external hard drivers or network server. Previous versions including Windows XP 2000 and Windows Vista also include similar features but the one provided in the case of Windows 7 is much secure and advanced.

An advantage of using Microsoft backup system it that it allows you to share online files which is highly convenient as youâ€™ll waste lot of time in mailing large attachments. However, in the case of Microsoft backup server, you can easily share large multimedia files and documents without losing data. The only downside associated with this feature is that your information is likely to get shared among different computers belonging to the same company therefore itâ€™s very essential for the users to create frequent copies of their data. The great Microsoft Corporation provides you the provision of creating Backup utilities with server operating systems. This is an example of free, unlimited online backup service nevertheless they only let you schedule backups for data files that are present on server only. They donâ€™t allow you to create backups for database driver server applications.

In such cases, you can always hire a third party of accessing additional backup features such as scheduling options and facility of using software like Microsoft SQL server and Microsoft Exchange. Hiring an external online backup agency is always beneficial because even though they might be asking you to invest some money nevertheless they offer secure online backup service. Some software applications also allow you to create a clone image of your entire server while some others offer you backup solutions in order to create a backup of your data on an online data center. These features further enhance your data safety.

However, if you wish to access enhanced security features and large storage space, you should consider hiring an external backup agency. If you find their prices quite high, you can wait for seasonal discounts or make use of online backup coupons.
