VB 6 â€“ a Programming Language with a Difference

by Julia Roger

Article published on July 14th 2012 | Internet

Imagine your computer without any graphics? Yes, it would appear useless to you if you are not able to use graphical user interface that interacts with the windows of your system. You might not be able to use dialogue boxes like font, color, input and output box and cannot create any menus for user applications. Thus vb6 is the lifeline of all such applications which require the functioning of graphical user interface. This program uses integrated development environment which assists in code writing. All the visual programs follow the same codes and based on this concept they can connect to the internet as well through the help of Explorer.

This development of the programming language has enabled programmers to create simple GUI applications. The .net development programming is a combination of visually arranging the components or controls on a form by specifying the attributes and actions of those components and writing additional lines of code for more functionality. An improved version of Visual Basic VB 6 makes use of collections by keeping a track of controls on a form and system printers. It is with the help of this executable code that the editing program texts the â€œIntelliSenseâ€• technology to popup a little window informing the user about the type of constructs to be entered at the current cursor location.

You can easily find this computer programming language online on the Microsoft website from where it can easily be downloaded. Do ensure that your VB is an updated one to run different applications as all of them might not support the same version. Before installing or running a program it is essential to install the â€œVisual Basic Runtimeâ€• which has been used to write the program If you are unsure which version you require you may download and install all the four versions in your system as they do not create any conflictions. This language provides a comprehensive interactive and context-sensitive online help system due to which it has wide applications. If you are a programmer then you must definitely know about the benefits of VB and its importance in programming history. Whether you wish to create advanced PDF documents or convert HTML color to RGB you now know the main component behind such changes.
