Advantages of CSS in Web Development by Justin

Article published on December 2nd 2011 | Internet Business

Cascading Style Sheet which is commonly known as CSS Style has made the process of web development pretty much easy when it comes to handling and developing web pages. Cascading Style Sheets as the term interprets is a style sheet that helps you to easily link to other documents in your website.

CSS only classifies the organization and content presentation of a website it and it has no concern with the design of the website. One CSS Sheet can manage the font, style, color and positioning information of the entire website.

The biggest advantages of using Cascading Style Sheet in your website are as follows:

Less Loading Time and Less Bandwidth

Most of the web developers prefer CSS style sheets for the web development as the files are lighter than table layouts which comparatively require a lot of bandwidth. The CSS style sheet is stored in the cache memory and needs to be downloaded only once, therefore the web pagesre are faster to load.

CSS style sheet is compatible with HTML

In website development HTML is not enough when used separately, but when it is pooled with CSS the resultant is in the form of technically stronger web pages.

CSS is flexible with all web browsers

The reason why many web developers combine CSS with HTML or XHTML is because CSS style sheet is very much flexible and compatible with all web browsers. Sites which are embedded with CSS style sheet shows up the same in all web browsers.

CSS helps in developing print friendly web pages

Many web developers would always prefer to use CSS style sheet for creating their HTML based web applications as they can let them create a print friendly web page. The best part is that these pages are easy to print. The colors, images and other things which are tricky to be printed can be eradicated and printed easily.

CSS style sheets permits to modify the webpage

There are many websites which will allow the site owners to change the complete layout of the web site without affecting its content. The CSS style sheets which are stored externally permit the website owner edit anything in the layout of the website all by themselves. Most of the advanced and modern browsers allow the user to create their own styles by changing fonts and colors etc.

CSS enables you to place your elements anywhere

Many Web developers like to use CSS style sheet as it permits them to place their element where ever they wish to on the web page. While developing a web page if the web developer get the idea that a specific column or link wont work out with the situation, then it gets convenient for the

developers to place the element without any hassle with the help of CSS style sheet. CSS style sheet lowers the chances which are linked with the maintenance of the website.

Cascading Style Sheet is to make things simpler and hassle free for developers when they are constructing your website and to give a total control over various developing elements in a website. Making use of the CSS advantages will help you build user friendly pages.
