# How Apple is Impacting Enterprise Software Development by Roger Lopez

Article published on March 21st 2012 | Internet Business

It has grasped the thoughts of its users and promises to revolutionize mobile application industry from top to bottom. A device, which simply means, â€œmake your life simpleâ€• but it has become possibl only due to a lot of hard work and dedication in field of Apple iPhone application development.

An innovative iPhone application raised an iPhone Development Company to superior, faster, and success levels for tapping into new users. It has not only met all the expectations but also continued its quality and consistency during its basic development stage to advanced stage. With the advent of innovative applications, today, Apple has accomplished a distinct position in market and made life easier for the customers and offered several marketing opportunities to number of organizations as well.

In recent times, enterprise software drove consumer software before consumer innovation of Apple but now everything has changed. Now software developers are looking for encouragements in both design as well as user experience. In this age of Information technology, Apple is not only approving products for designers, in fact, today more than 500 fortune companies are testing and deploying iPad.  Undoubtedly, Apple has revolutionized the consumer experience, yet they also affected the enterprise so far

Due to this, Apple has been turned for

An advanced mobile user experience which exactly look like iOS

A more user-friendly environment for mobile app development

A promotional event for advertising apps in their own enterprise

In case of design, Apple has changed its vision and has been influencing everything. Due to its clear layouts and brand identity, Apple has gained much reputation. More the mobile apps arrived in market more it enhanced its look. Who can forget rounded corners, glossy buttons and yes, the reflections? Once the designers copied the look of Apple, the developers started copying user experience to make everything intuitive.

At present, Salesforce and SAP enterprise developers provide app developers an indigenous platform to expand more. Many apps have been created by copying the idea of open source development and the app marketplace.

When Android phones were hitting a big place in consumer marketplace, then at the same time Appleâ€™s iPhone was all the rage consumer-grade Smartphone that crusaded all the ways of our vision and prospects.
