# Internet leased Line: How effective is it? by Ajay Kumar

Article published on February 29th 2012 | Internet Business

We all know that businesses today are very much dependent on Internet for several activities. It offers businesses with a quick and a reliable set of resources and tools. Almost all businesses today use the services of Internet to advertize and market their businesses. Business owners are always seeking to make their business more efficient and successful. In order to solve this problem almost all businesses have started using Internet Leased Line services. This service offers a reliable level of connectivity to users and makes the business more dynamic and commercial.

An Internet Leased Line connection has been termed as a great option for businesses that require a consistent Internet connection. This fibre optic cable offer users with a fast web connection and a superior level of connectivity. A Leased Line is a dedicated data line that is usually used to link several branches of an enterprise. If your business has multiple branches, you can go ahead and use this dedicated line to connect all your branches. This connection offer users with a very safe and personal connection, which is very superior to any other broadband package. This dedicated private connection also allows a business to send vital data securely. It is also known to be symmetric in nature, which allows a user to benefit from same kind of upload and download speed.

One of the main benefits of using a Leased Line service is that a business can save a lot of time and money by using this solution. A business can use this service to have VOIP (voice over internet protocol) solutions, which are considered one of the most efficient services today. One major benefit of using Leased Lines in India is that it is available in several options to users. Depending upon the speed a business requires a user can choose his option.

The companies, which offer Leased Lines in India, also provide their users with a comprehensive service level agreement (SLA) for the reliability of the service. These service providers also offer round the clock support to their clients, which is considered absolutely critical for this service. A user normally needs to pay an annual fee to the service provider for the use of the service. As it is known to be a 24-hour service with constant support, it provides a structure that makes sure that a user can connect to the host server and Internet very quickly.
