Five Steps for Perfect Shop & Commercial Fitouts

by Samuel Dean

Article published on March 19th 2012 | Management

Have you ever visited those exceptionally professional shop fitouts like Cold Rock, Skinology, Decks Seafood, Gloria Jeans, Ella Bache, Eagle Boys, Nando's and Noodle Boxes in Brisbane, Sydney or Melbourne and all through out Australia and wondered to yourself 'how could they come up with those striking ideas?'

This is the magic that new trends in shop fitting technologies that can bring any retail shop or commercial fit out success automatically finds its address. Your shop design and dÃ©cor impacts your sales. Shop fitting is not something you can do yourself. You need to hire professionals to carry out the job. But, what you can do at your best is to choose a right company for shopfitting job. You need to acknowledge two things. One you are not expert as a shop fitter. Second no ordinary shop fitter can bring about that magic. You have got to choose shop fitting professionals. This of your investment will certainly return manifold.

Here are five things that you should focus on while planning shop fitouts:

Step 1 Design - If it is a new shop you better plan a layout for it before starting operations. It will save you a lot of time, and trouble later and keep you from spending years in an uncomfortable, poorly organized space. If you are seeking renovation of an existing shop use your experience while discussing its design with shop fitters. Of course the designer should also have experience in his own field and you both together can bring out a masterpiece. Measuring is the most important part of shop fitting and good distribution of spaces will avoid many troubles in the future such as dead areas, easy stocking, theft etc. In order to achieve its full potential, each store needs a custom designed. You have to put forth your concept and it's your designer's job to envisage the technical complications, if any, and suggest solutions.

Step 2 Time Schedule - you should get a fair time estimate for the job and ask your shop fitting contractor to adhere with it. This way you are in a better position to plan an opening ceremony, advertise and inform an exact opening date to your customers.

Step 3 Budget - It is often seen that an inexperienced shop fitting contractor fails to calculate exact cost and time estimate and later creates problems for both the parties. An experienced shop fitting professional knows what and how much to calculate. A thorough calculation of the budget sets you free of any problem in between the completion.

Step 4 Quality - only good quality of material can ensure long lasting elegance in your shop. You should keep monitoring the work and make sure that the contractor is using same material that he has promised. Because there is no way to know once material has bee applied and fixed.

Step 5 Communication - It is important that you meet your shop fitting project manager at regular intervals and know about the developments. This way the contractor would know that he has to be responsive towards you and would not indulge in any unfair activity.

Tuprojects is retail shopfitters that develop shop Fitouts solutions for you in context of demanding, competitive and ever changing market.
