LED Lighting Industry Rendering Benefit to Society by Greekexchange

Article published on January 20th 2012 | Management

Since the traditional bulbs and fluorescent lamps were out phased from the market, LED lighting manufactures have been rising day by day. Many traditional light manufacturers are turning their bulb making industry into LED Lighting Industry as in coming years every house will use LED lights to light their homes. The reason behind the popularity of LED lighting is the benefits associated with it. The prime benefit LED lights have to offer is that it consumes less power than traditional filament bulb and compact florescent bulb. Though the rates of LED bulbs are higher than other bulbs, the low electricity bill and long functioning life bulb makes it cost effective solution for your monthly budget. You find a great different in electricity bulb after using LED bulb in your home.

The other benefit of using LED light bulb is that they are more energy efficient that other ordinary bulbs. LED bulbs are capable of emitting more light and way higher per watt power than other bulbs; other bulbs use more watts producing light and emit lots of heat. LED bulbs have long functioning life and this is possible due to their energy efficiency and low power consumption. A life span of a LED bulb is more than thirty thousand hours, whereas life span of an incandescent bulb is one thousand hour. It means that the LED light bulbs can work for around twenty years. Owing to its various benefits manufacturers are manufacturing different types of lights, which include from normal LED bulbs to LED Spot Light Bulbs. LED bulbs are available in various colours used for various purposes of interior decoration.

Other benefits of this type of bulb is that it is environment friendly bulb and extremely safe. As these bulbs do not have filament like incandescent bulbs, the chances of burning out is eliminated automatically. These bulbs do not contain mercury like fluorescents lamp that is why disposing off LED bulbs is not hazardous. In addition to that LED Replacement Lamps do not emit ultra violet lights and they are ideal to use at office and homes. The lights are available almost in different colours, shapes and sizes, which are used in different places such as night clubs, shopping malls, salons, bars, shops, entertainment venues, etc. LED lights are also used for business promotion and making billboards and signage. If you are about to buy a bulb then opt for LED light bulb for your home to save electricity and making it energy efficient.
