Save Money by Sending Your Building Supervisor to a Building Maintenance Training

by DJ Willis

Article published on December 23rd 2011 | Management

Facility or building maintenance training teaches students the best way to achieve operational and performance objectives for your variety of systems inside a facility. The courses covers daily cleaning and repairs in addition to long-term maintenance. These system areas include HVAC Training, Mechanical Training, Electrical Training and Facilities Management Training and even PLC courses.

Basic training is accessible for starters, and the programs advance up to management practicing for supervisors and administrators. The education is essential for workplace success. Unsafe and ineffective staff are of no value for an organization and will damage the business. Employees that may recognize and solve troubles are valuable assets.

Industrial maintenance training is another name for facility or building training. One of the training goals would be to provide workers with safe and healthy surroundings while keeping the structure functional. This means that the workspace must have no safety hazards and then any dangerous materials onsite can be used and kept in an appropriate manner. Easy availability of chemical safety data sheets as well as safety equipment such as rubber boots, gloves and masks is important.

The well trained maintenance worker can check fire extinguishers, exit lights and fire alarms to make sure they are in good working order. A familiarity with equipment and power shut-off locations can also be required of maintenance technicians. Building equipment and systems are company assets that must receive proper maintenance. This is necessary for warranty protection as well as to extent the working lifetime of the tools.

HVAC courses are a part of maintenance training. Thousands of technicians have already earned HVAC certification with special focus on the EPA 608 Refrigerant Recycling Rule. EPA 608 Certification is a requirement of people who cope with controlled refrigerants used in refrigeration and ac systems. Related courses include HVAC Controls and Air Distribution, Chilled Water Systems and Boiler Operation and Maintenance.

Electrical training seminars are also a big part in the training curriculum. Beginning with Basic Electricity, Electrical Safety and Troubleshooting courses, there are a number of additional courses that may provide the requirements for a qualified electrical worker. Testing allows students top earn certificates for example ATMT electrical certification. Courses include National Electrical Code, Generators and Emergency Power and Arc Flash Training.

Mechanical training is a big a part of industrial maintenance training. After taking courses in fluid power, pumps, steam, plumbing and welding, you will be able to save lots of energy, money and time in your workplace. For instance, pump maintenance and repair classes demonstrates to you to quickly fix problems to reduce downtime. Furthermore, proper pump installation may eliminate expensive frequent repairs altogether.

Maintenance management is another section of study for supervisors and managers. Courses include Conducting Your Personal Energy Audit, Maintenance Planning and Scheduling and Predictive Maintenance. The constant maintenance planning course teaches work performance measurements, prioritizing work, controlling backlogs and dealing with emergencies. All courses can increase the efficiency from the facility.
